How to fold the book

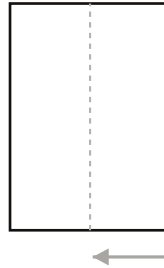

Dark Phonics · Writing Shelf · Tray 6 · TEACHER SHEET — print page 1 only for the children

Print page 1 at 100% — never “fit to page.” A4 landscape, plain 100–120 gsm, one-sided. Grey dashes are folds; the amber line is the only cut.

- 1** Fold the sheet in half, short edge to short edge. Crease it hard.

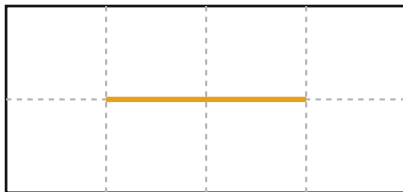

- 2** Fold in half again the same way. You now have four columns.

- 3** Fold in half the other way, across. Eight panels are creased. Open flat.

- 4** Open flat. Cut the amber line in the middle — and nothing else.

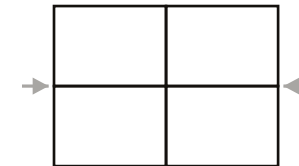

cut **ONLY** the amber line
it stops at the fold lines either side

- 5** Open out, then fold the whole sheet in half the long way. The slit is on top.

- 6** Push the two ends towards each other: the slit opens into a diamond.

then flatten it, MY BOOK on
the outside, and crease the spine

p5	p4	p3	p2
p6	p7	p8	p1

Page map

Where each page falls on the sheet. Page 1 of the PDF is printed blank — no p-numbers, nothing for a child to read — so check the order against this. The top row prints upside down; that is correct. **p1 is the front cover. The amber line is the only cut. Make six in advance.**
